Carousel/Slider image/video gallery of musicians using music

- director placing a sheet on a clarinetist's stand
- choir holding folders
- music librarian sorting through scores in a room with shelves of music

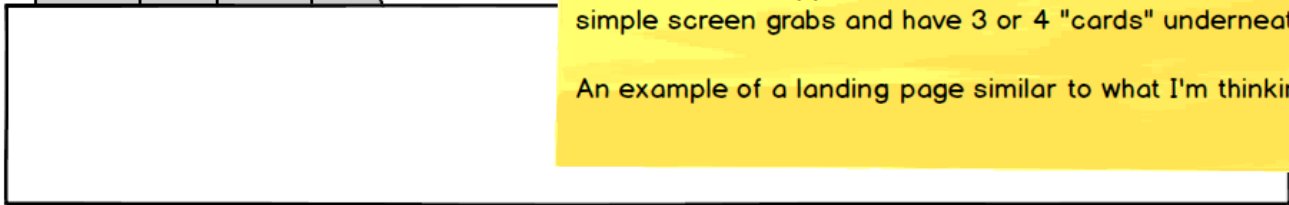

Home/Landing Page

Music Library Catalogue Web App

Some catchy phrase to describe organizing your music library, cd or movie collection

Catalogue Peruse Organize Share

Features of the app could be described on these tabs or we could do some simple screen grabs and have 3 or 4 "cards" underneath the main image

An example of a landing page similar to what I'm thinking of is <http://mint.com>

Create New Library "Page" (notes)

Create title/description of library

Declare type of library (choral music, orchestral score, cd collection, etc.)

Choose from existing templates containing pre-filled categories to include for each entry or start from scratch

Categories on templates can be added/deleted

Option to set certain number of "primary" categories to display on main library page

Info on this page used to dynamically setup forms/view for individual entries

-Are there API's available to query for information about each piece? Maybe for cd's only?

- Simplified Version: Only allow pre-existing templates to be used
